

BULLY DOG
#1 IN PERFORMANCE

1st to Market with '10 Dodge Cummins

Continuing the tradition of releasing product to market before anyone else, Bully Dog Technologies does it again with tuning now available for the '10 Dodge Cummins, RSA equipped vehicles, on the GT and PMT.

Developing superior product and being the first ones to offer product for new vehicles is what Bully Dog prides itself on with this new release they have accomplished what many in the industry have said could not be done, cracking the RSA on the Cummins. Bully Dog did more than just crack it, they have developed tuning that provides large power gains, increased fuel economy and gives the user adjustability of their truck. The 2010 Cummins is now supported by the GT Diesel and the PMT. Existing product can be updated on the Bully Dog Update Agent free of charge today. Product manufactured after August 5th will already contain the programming for the 2010 Dodge Cummins.
