

# RAPID FLOW

Cold Air Intake

ALL NEW  
for  
2010

**BULLY DOG**  
#1 IN PERFORMANCE

## Locks in the Cold, Blocks out the heat

The RFI™ is an advanced cold air intake system made to increase the engine's performance by delivering more cold air to the engine. This will improve fuel efficiency dramatically as well as add horsepower and torque.

Most of our RFI™ systems are designed as an enclosed system. Our enclosed systems are designed with a few simple goals in mind: keep hot air out of the air intake stream, make sure systems only pull air from cold air sources from within the engine bay, accommodate a high flow cotton gauze air filter, and improve the look of the engine bay with a great looking intake. By following these simple goals we are able to provide colder air and more air to the engine. Thus providing better performance than a stock intake; the resulting benefits are: improved fuel economy, more horsepower and torque, lower cost of ownership than stock air intakes, and an upgraded look to engine bay.

### Ford 6.4L Power Stroke '08-'10

Part# 51103

### Ford 5.4L F-150 '09-'10

Part# 51200
