Part #62001

Max Energy™ Power Programmer features

- Optimized engine tuning for regular and premium octane
- Remove 0-60 mph Electronic Throttle Restriction
- Change top-speed limiter and rev limiter
- Read, display, & clear DTCs

Feature Highlight: 0-60 mph Electronic Throttle Restriction

The “selectable throttle restriction” tunes the engine control systems for better low speed performance without sacrificing driveability, but it does not disable the torque management completely. There are many different torque management systems active at any given time while driving. During our tuning development we altered most of these systems in different combinations to assess the impact on performance, and driveability. We took the best combination of those changes and combined them with further tuning to improve the overall performance and driveability under all driving conditions. The overall affect is a dramatic, instant increase in throttle response while maintaining driveability. This selectable feature will definitely benefit the performance enthusiasts who wants to leave the line with the full power this vehicle is capable of making.
