# 3

*Lightly saturate* the towels with disinfectant in a sealable container - Tupperware, an old wipe container, or even a Ziplock bag. Using a gloved hand is best - do not saturate your hand in the liquid. Never place a wipe back into the container - always use a sanitary, new wipe each time. Or, just spray disinfectant on any hard surface, allow product to sit, then wipe with a sanitary, new wipe. Your disinfectant wipes work on countertops, car interiors, desktops and more.
